

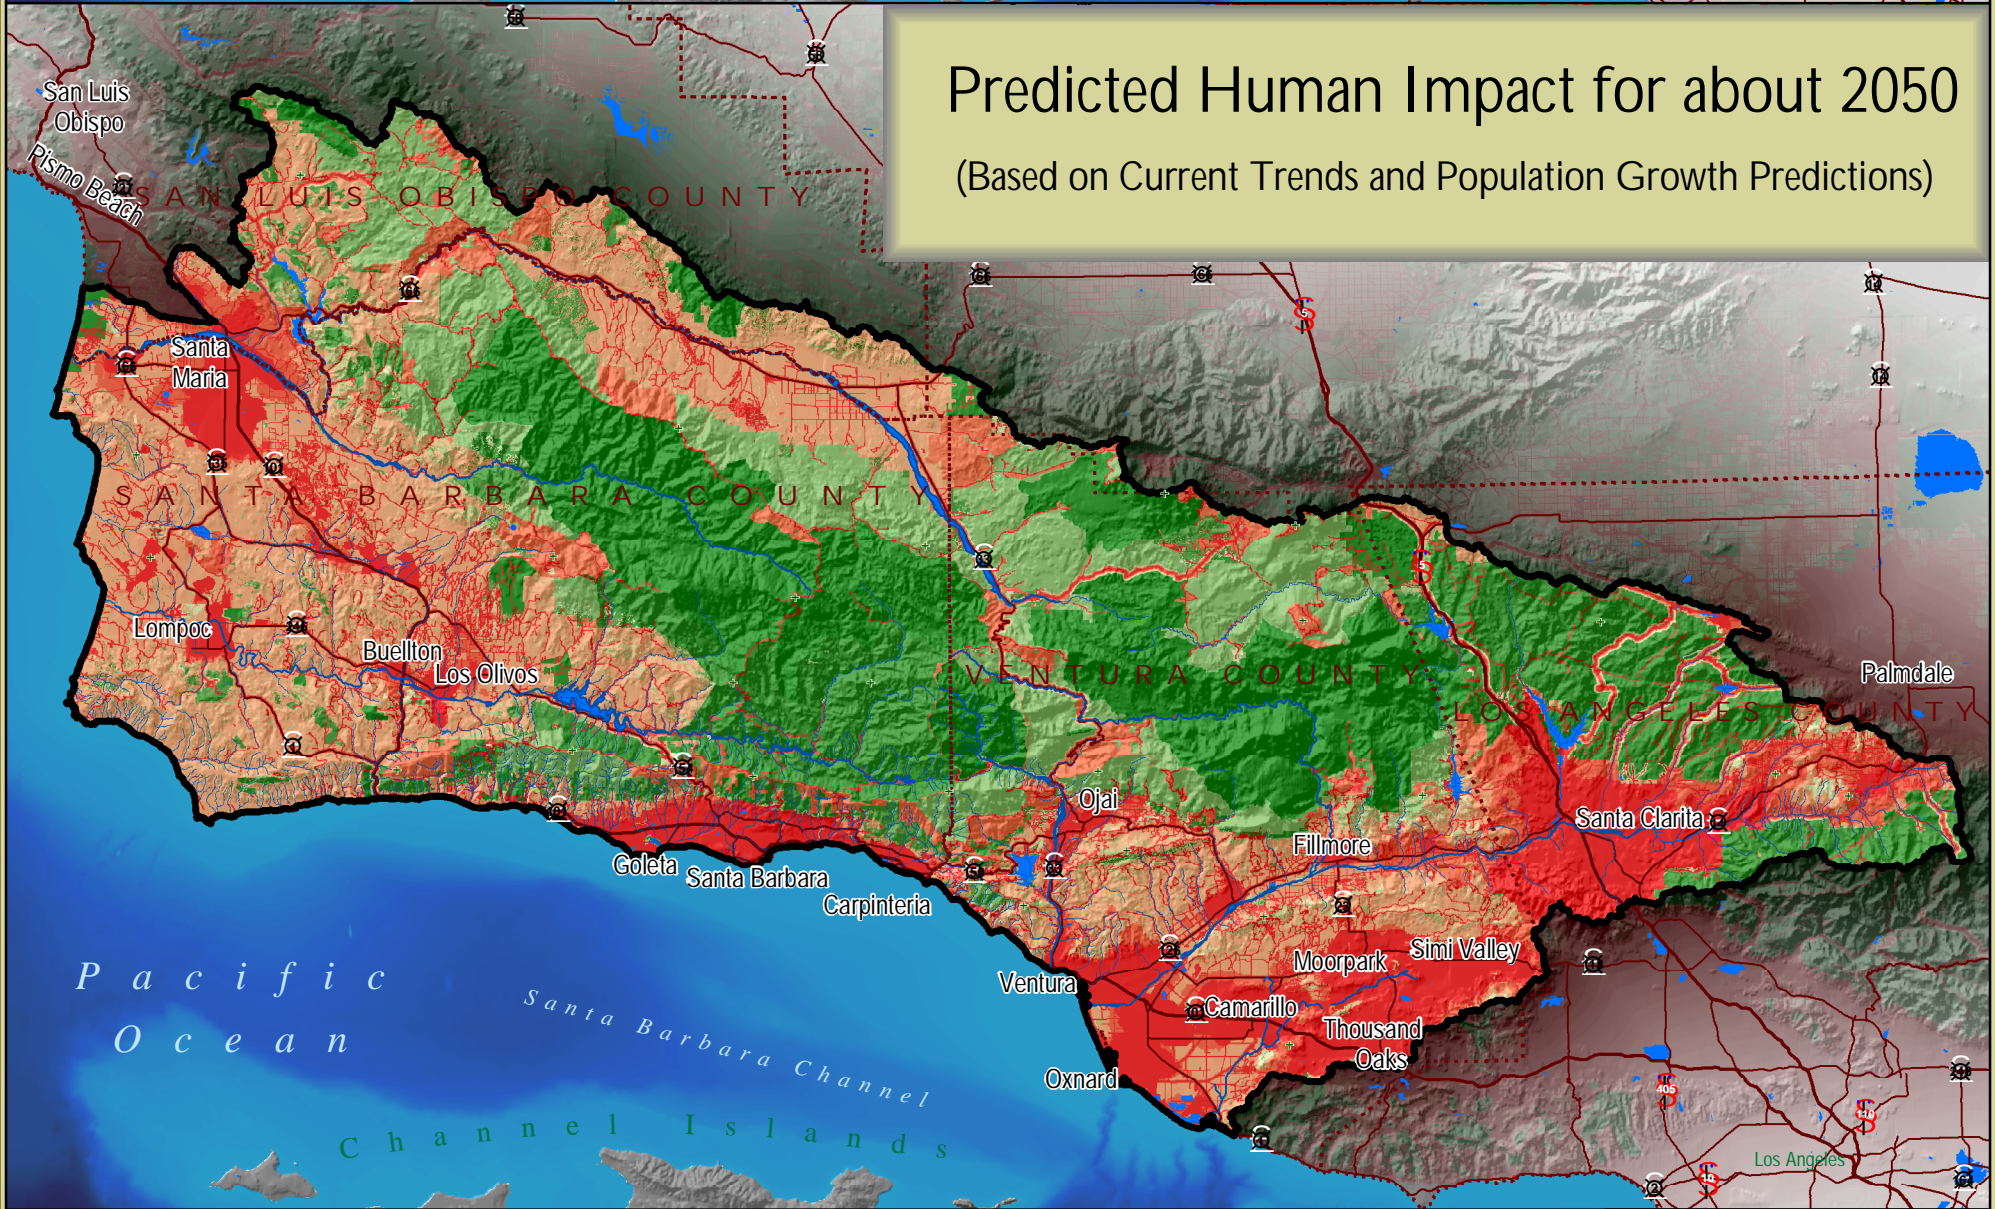

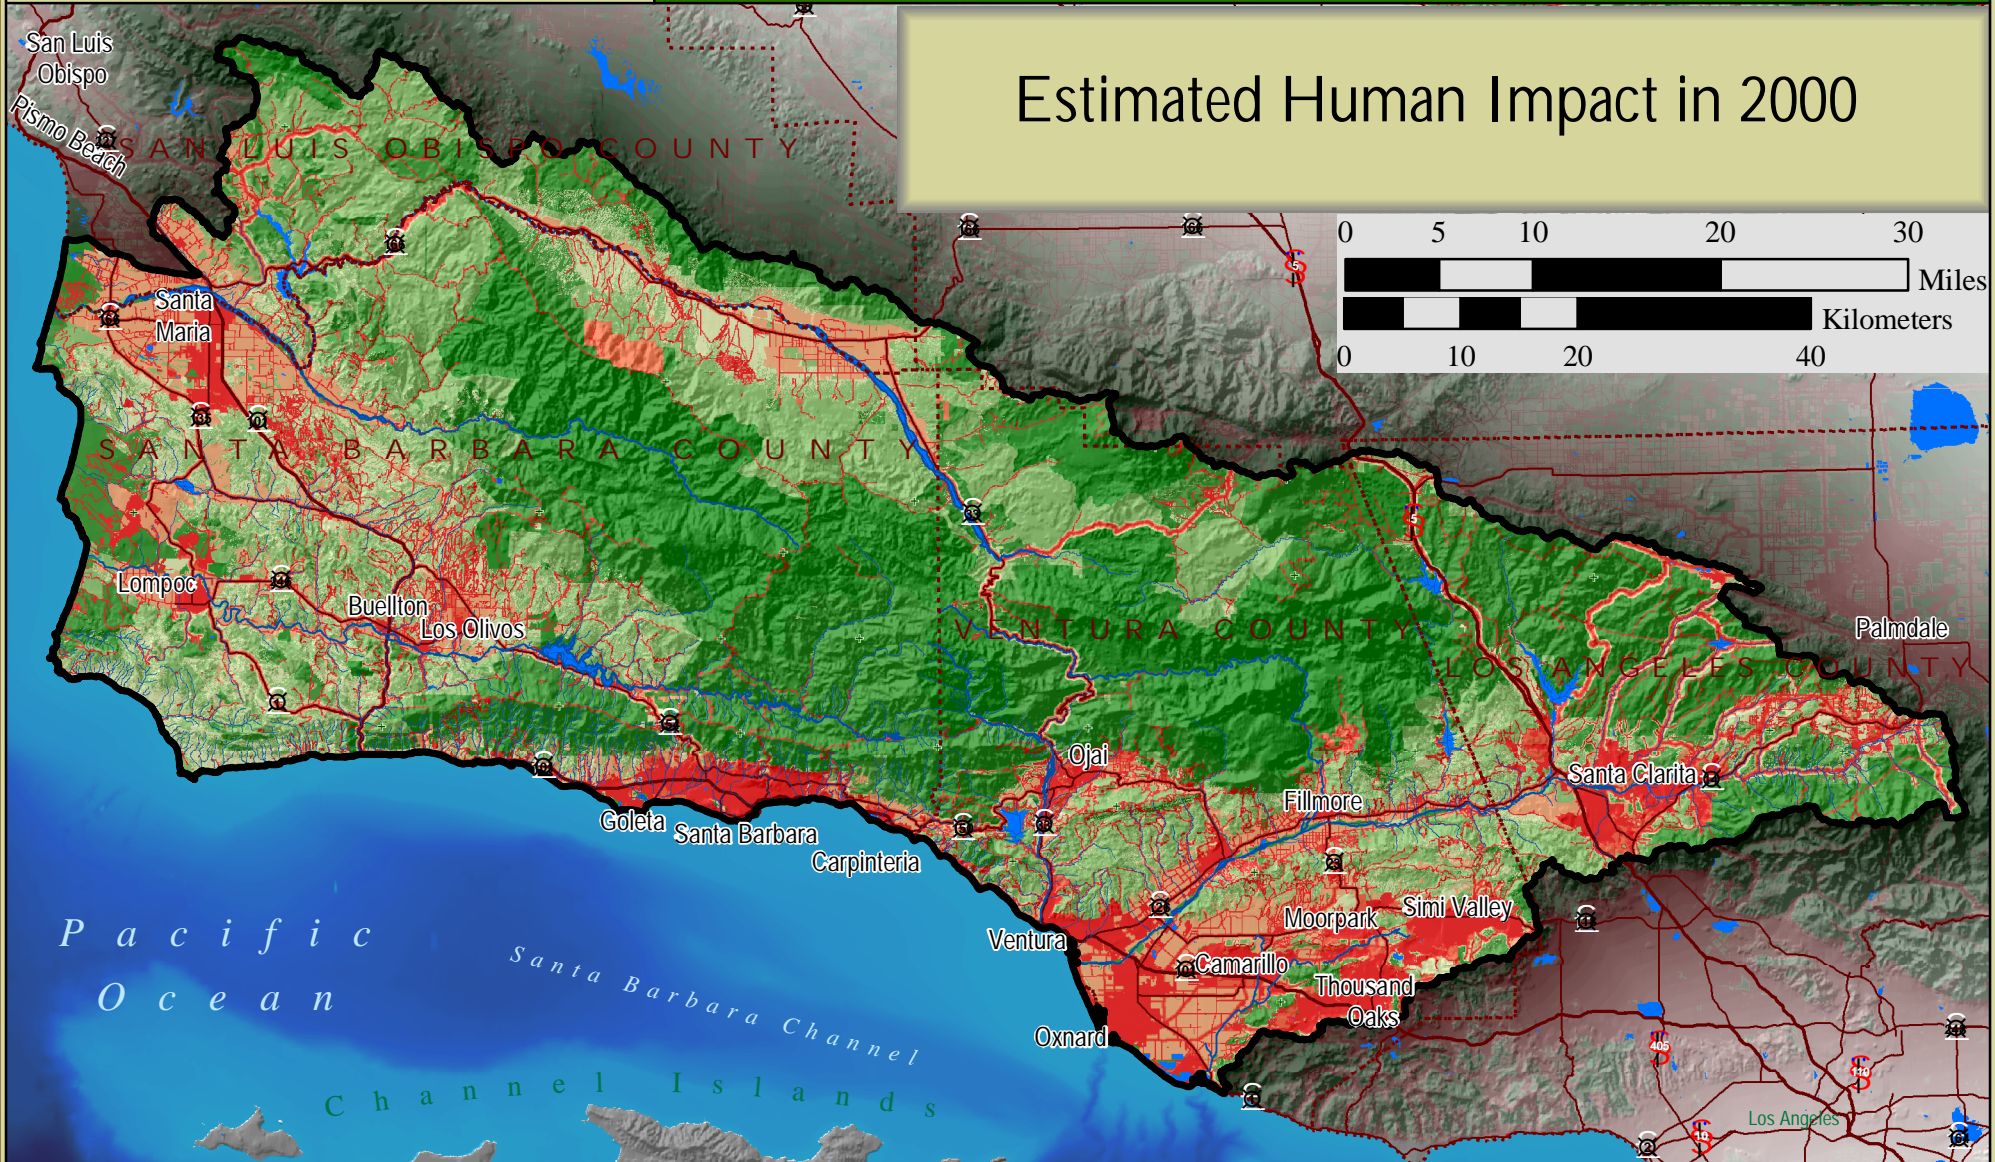

Figure 19: Comparison of Current and
Predicted Human Impact
within the Conception Coast Region

Degree of Human Impact

- High : 1.000000
- Low : 0.000000
- RCG Boundary
- Counties
- Highways
- Mountain Peaks

Methodological Overview:

The predicted human impact on our region in a half century is estimated by combining the urban outgrowth model, the sub-urban and rural out growth model, an agricultural outgrowth model, and an industrial expansion model. This is compared here to the current human impact (first presented as Fig. 7), using the same scale bar and values. For the data sources of this analysis and more information, please see Appendix A and Chapter 4.
